

# **Global Navigation Satellite System (GNSS) research and services at the Geodetic Observatory Pecný**

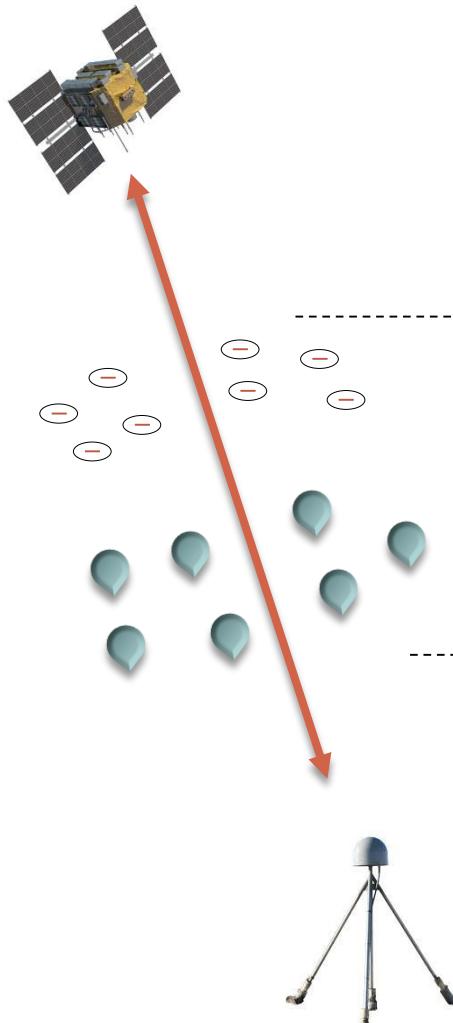

Jan Douša,

Pavel Václavovic, Michal Eliaš, Petr Bezděka, Lewen Zhao

**Geodetic Observatory Pecný (GOP)  
Research Institute of Geodesy, Topography and Cartography (RIGTC)  
Czech Republic**

# GNSS data analysis – models/errors

GNSS: Global Navigation Satellite Systems – GPS, GLONASS, Galileo, BeiDou

**Satellite orbits (positions)**

**Satellite clock corrections**

Satellite antenna models

Phase wind-up correction

**Satellite hardware delays**

**Ionosphere delay**

**Troposphere delay**

**Multipath effect**

**Receiver clock corrections**

Receiver antenna models

**Receiver hardware delays**

**(Terrestrial reference frame)**

**Satellite-specific effects**

**Atmospheric effects**

**Site-specific effects**

# G-Nut/Anubis for GNSS data QC

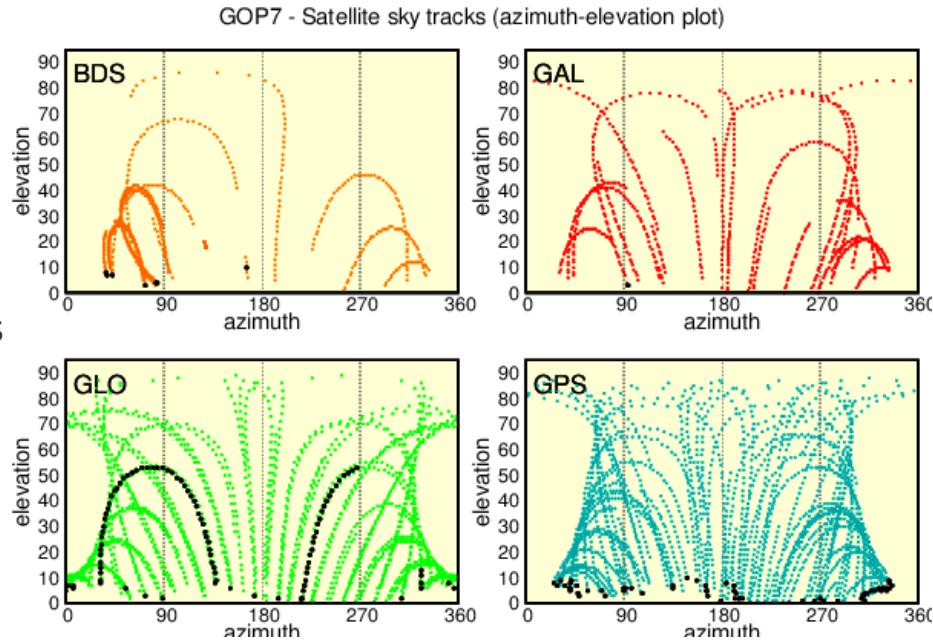

Open-source software for multi-GNSS data quality control

<http://software.pecny.cz/anubis>

→ GOP contribution to the **European Plate Observing System (EPOS)**  
 GNSS data and products **Thematic Core Service (TCS)**

## Key functionalities:

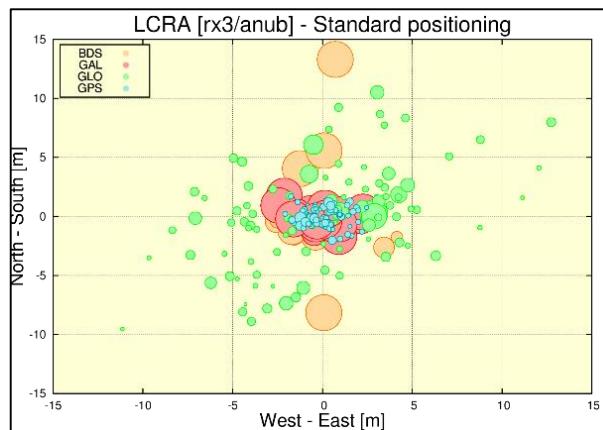

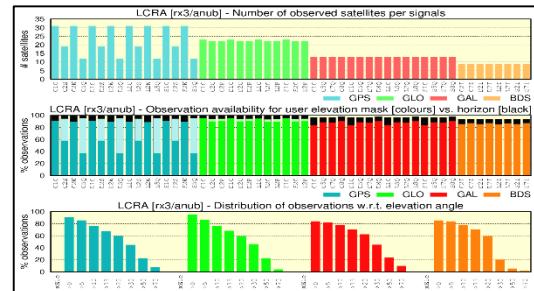

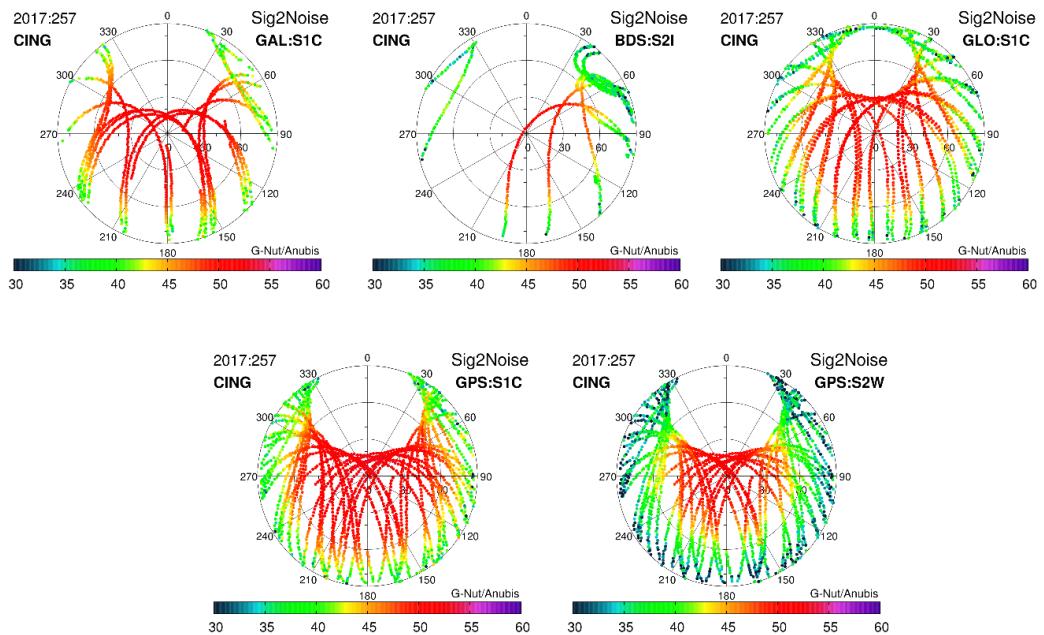

- Summary statistics over key parameters
- Data availability – data gaps, small pieces
- Observation-specific statistics
- Phase processing (cycle slips, clock jumps)
- Azimuth/elevation information for sky plots
- Pseudo-range multipath, signal noise
- Standard positioning, repeatability, GDOP
- Consolidation of navigation messages
- Format and metadata control

# New GNSS Reference Network in Italy

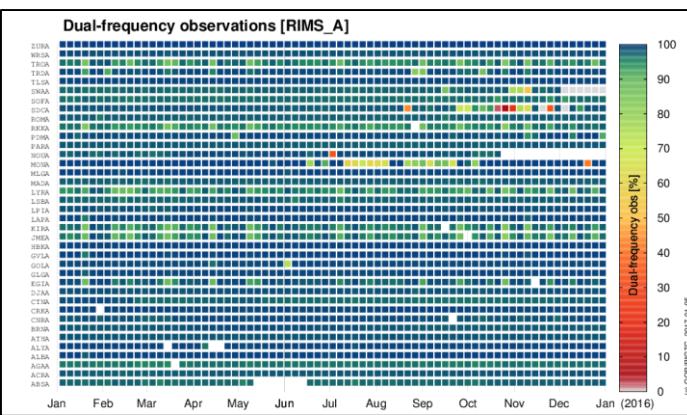

e-geos  
AN ASI/TELESPIAZIO COMPANY

Full multi-constellation data processing, consultation for location/environment new 32 fiducial stations

# EGNOS Service Performance Monitoring Support (SPMS)

# **Goal: EGNOS RIMS site environment monitoring European GNSS Agency (GSA) (2016-2020)**

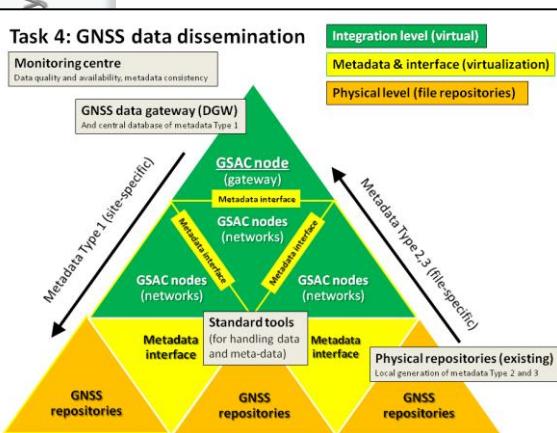

# EPOS: European Plate Observing System

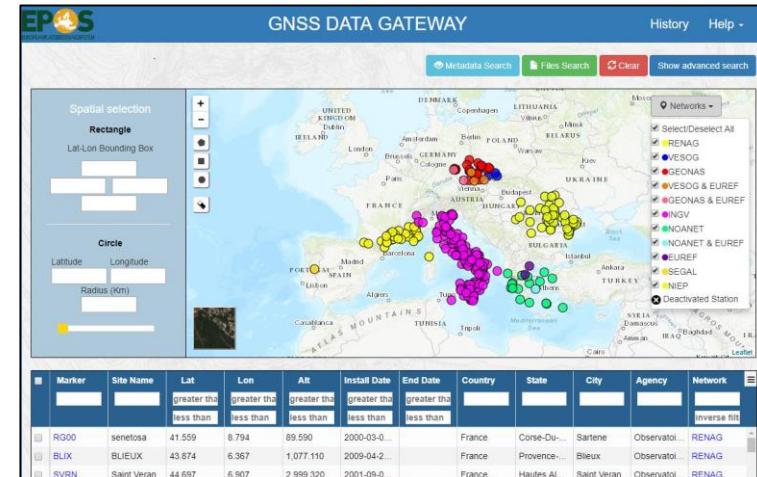

## Contribution to the Solid Earth Science (SED)

- European Large Research Infrastructure for SED following the EU roadmap of *European Strategic Forum for Research Infrastructures (ESFRI)*
- Coordinating development of **new way of GNSS data dissemination (GLASS software)**

<http://www.epos-ip.org>

- **Preparatory phase**  
FP7: 2012-2013
- **Implementation phase**  
H2020: 2016-2019
- **Operational phase**  
ERIC: since 2020

## CzechGeo: Czech National Research Infrastructure

### National RI for geophysical observations

- GNSS observations, data dissemination and analyses  
→ *EUREF Densification and Reprocessing, GNSS Meteorology*
- Liaison to the EPOS project – maintenance of national EPOS node

<http://www.czechgeo.cz>

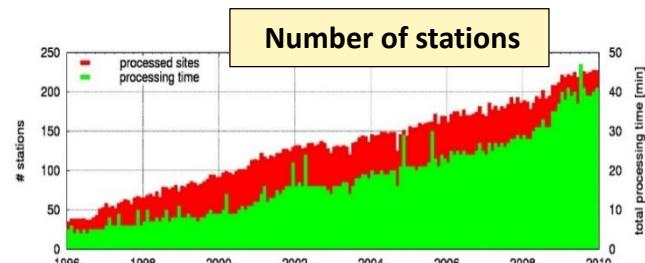

# EUREF: European Reference Frame (IAG sub-commission)

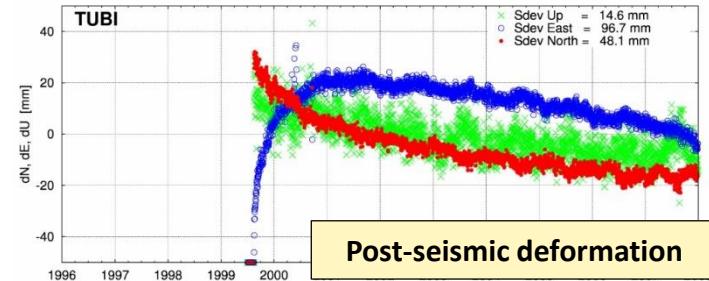

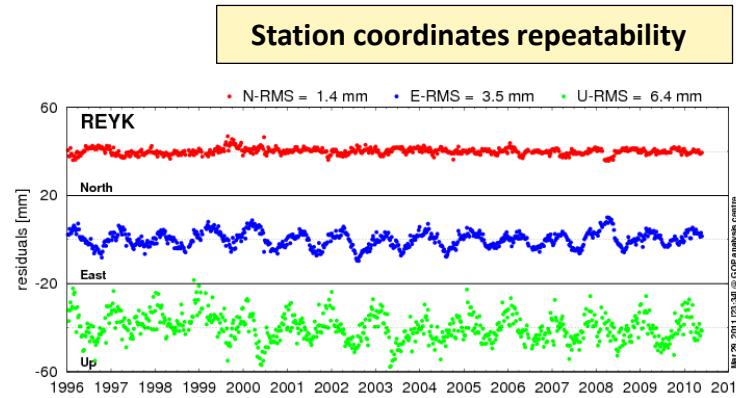

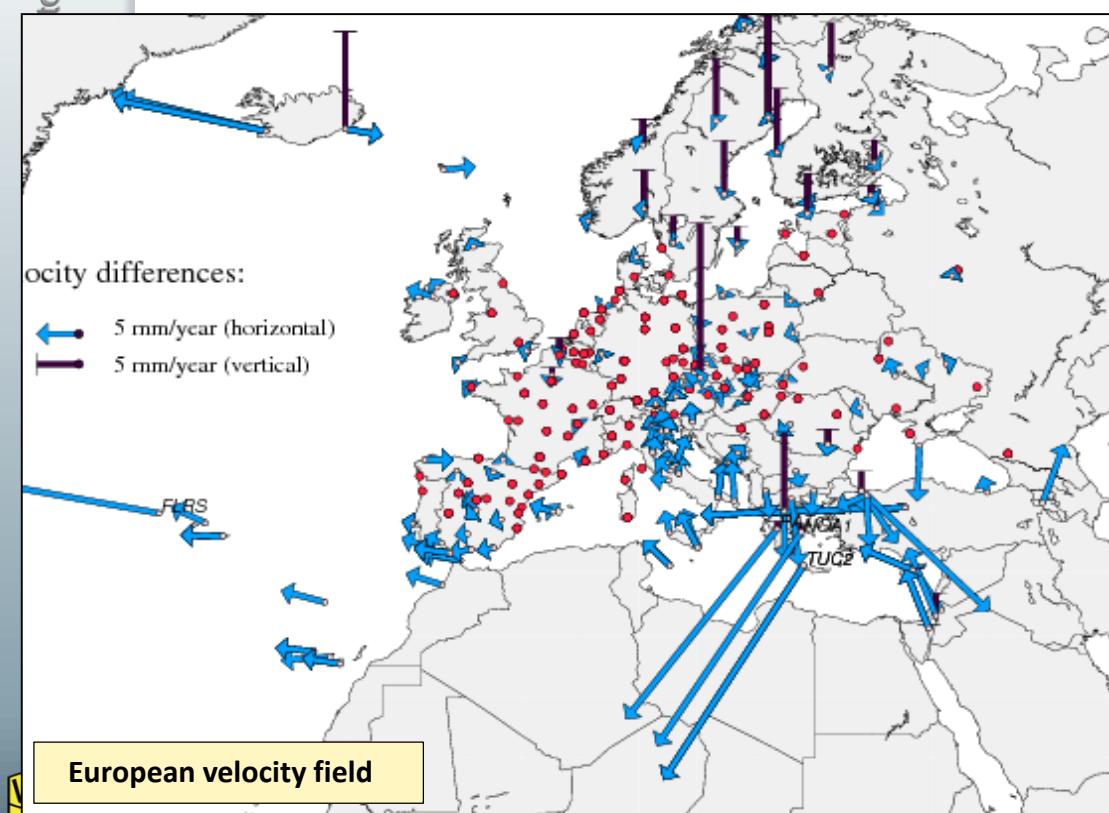

<http://www.euref.eu>

## Activities since 1996

- GOP Analysis and Data Centers
- Membership in the EUREF Governing Board (GB)
  - **Reprocessing:** homogeneous analysis 1996-2014
  - **Troposphere:** estimates and validation
  - **Multi-GNSS:** data QC, multi-GNSS processing
  - **Real-time:** real-time processing, data dissemination

topography

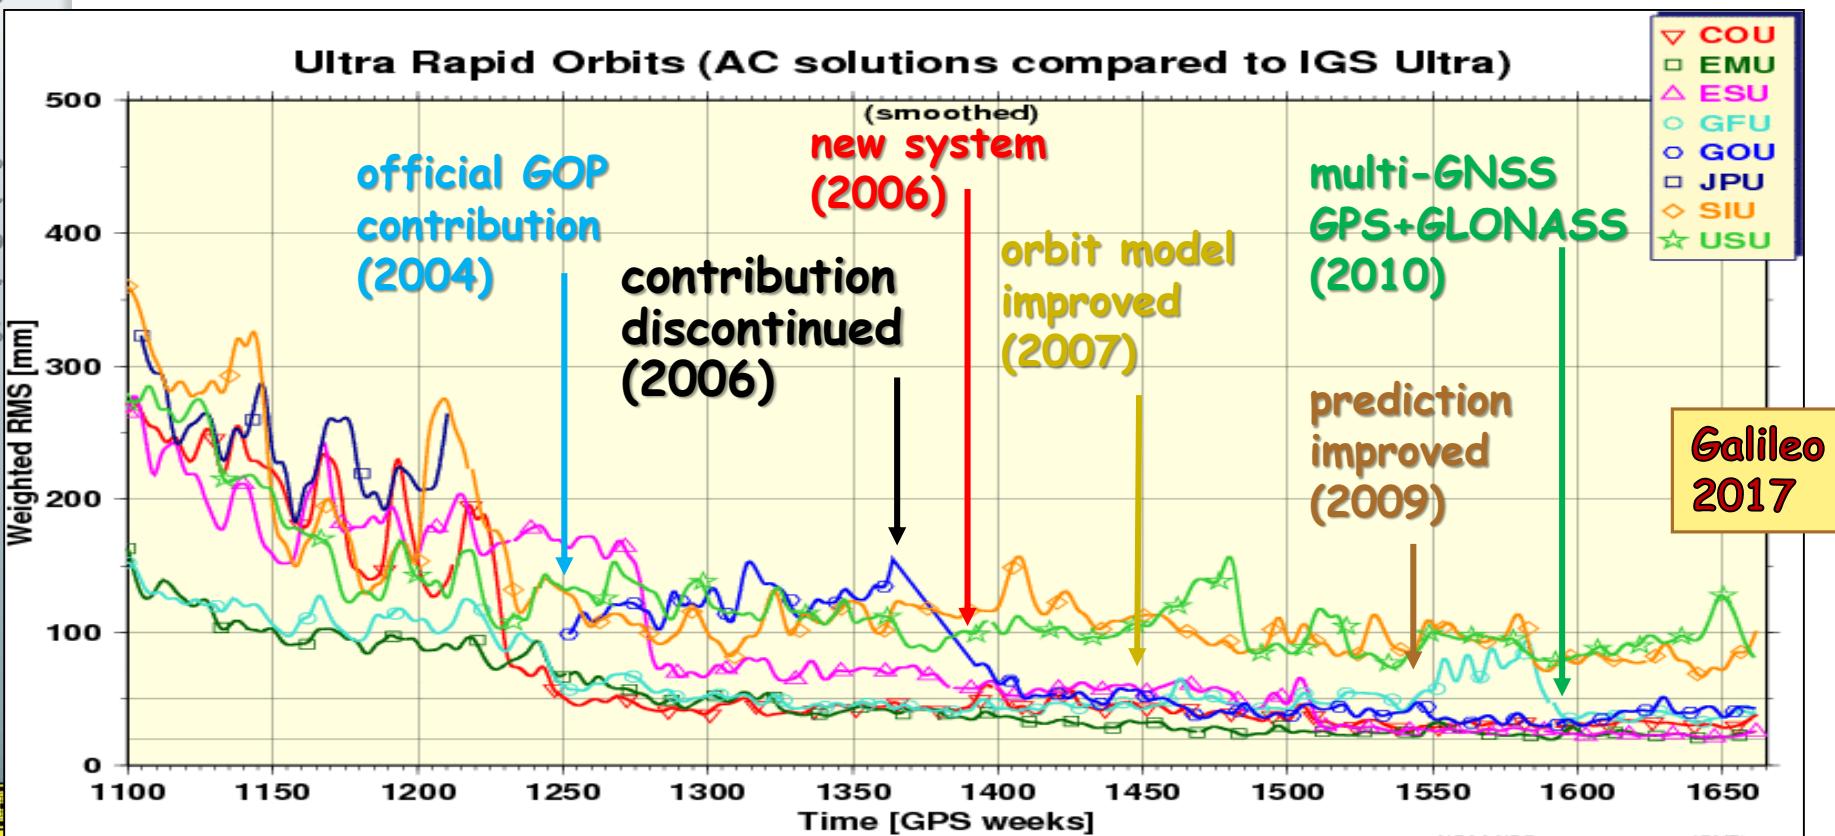

# IGS: International GNSS Service (IAG service)

## Contributions to global precise products and services (since 2004)

- GOP Analysis Center for precise ultra-rapid orbits (GPS+GLONASS)
- Czech-US (US Naval Observatory) bilateral project (2013-2016)
  - *Troposphere*: inter-technique parameter comparisons (GOP-TropDB)
  - *Multi-GNSS*: data quality control, consolidated navigation data
  - *Real-time*: real-time GNSS analysis – troposphere, positioning, clock corrections
  - *GNSS SISRE / performance monitoring*: IGMA (UNOOSA-ICG) and IGS trial project

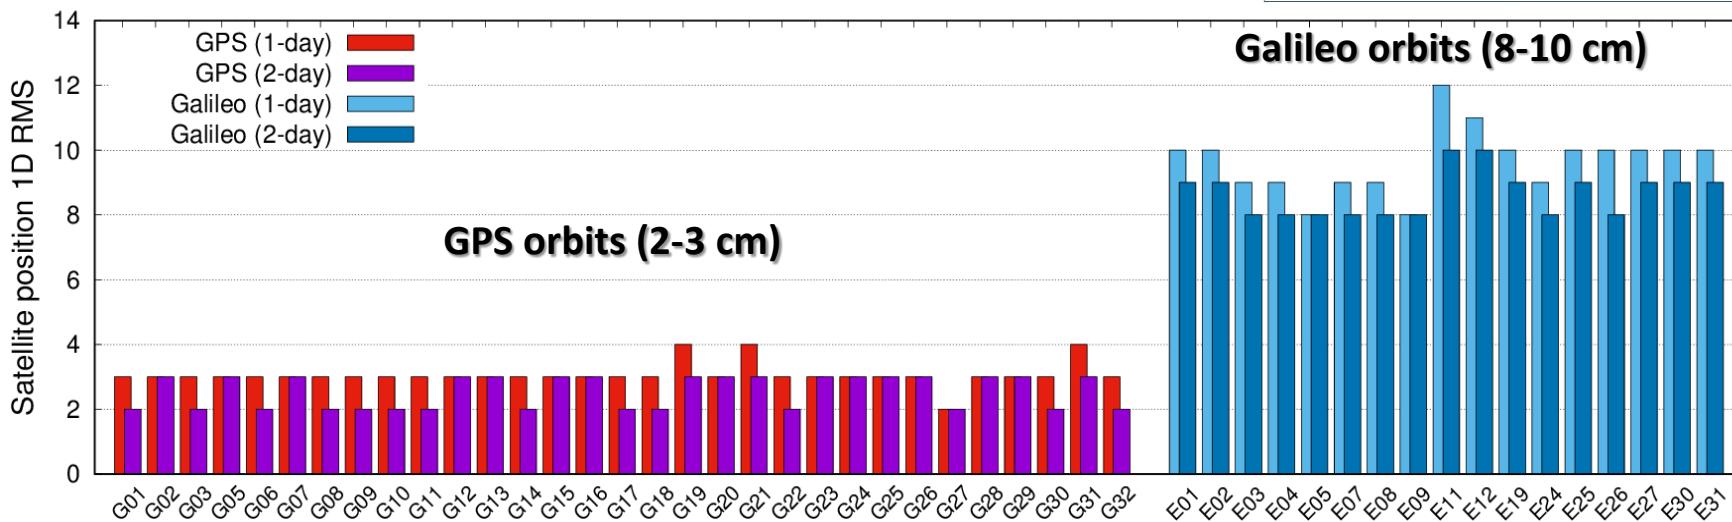

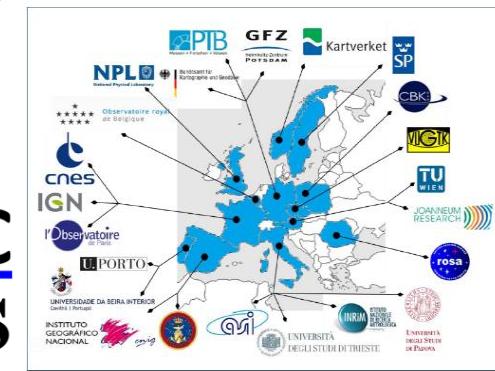

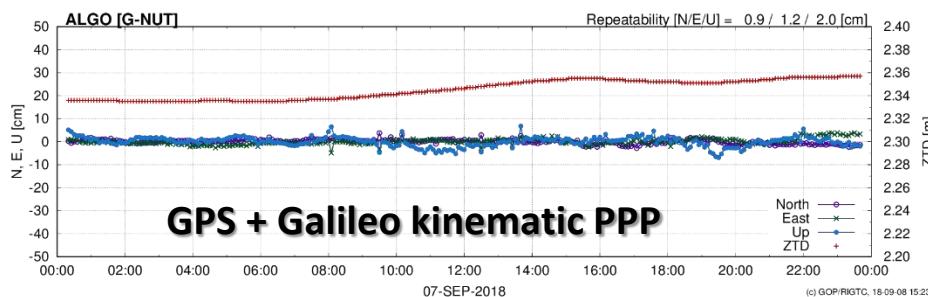

# GNSS precise orbits and clock corrections

## Precise RAPID products (GPS+Galileo)

- Bernese GNSS Software V52 (orbits) and G-Nut/Sothis (clock offsets)
  - network solution (~120 stations) of dynamically adaptable clusters
  - 1/2/3-day products initialized with GOP consolidated navigation data

➔ *developed in support **Galileo Reference Center***

# Consolidated multi-GNSS navigation messages

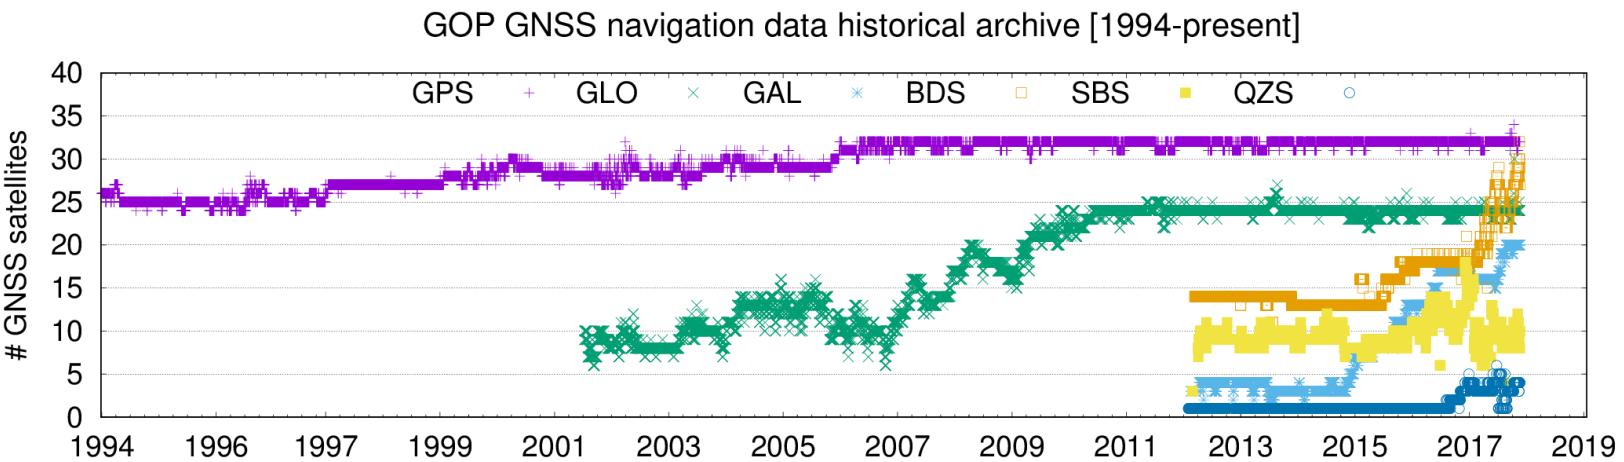

→ supporting multi-GNSS data QC, POD, signal-in-space monitor, etc.

**In-house developed strategy without need of external data**

- range checks and data pre-filtering (conservative approach)
- time-series parameter analysis (for pre-selected parameters)
- header consolidation (RINEX 3)
- healthy status consolidation (statistical)
- total group delays consolidation (statistical)
- identification of problematic receivers (health status, TGDs etc.)

- ✓ G-Nut/Aset software (in-house)
  - ✓ collection over 300 data files worldwide from IGS network
  - ✓ multi-step procedure using RINEX2, RINEX3, hourly, real-time
- full archive since 1994 (consistent for both RINEX2 and RINEX3)

**RINEX3 daily files:** [http://ftp.pecny.cz/LDC/orbits\\_brd/gop3](http://ftp.pecny.cz/LDC/orbits_brd/gop3)

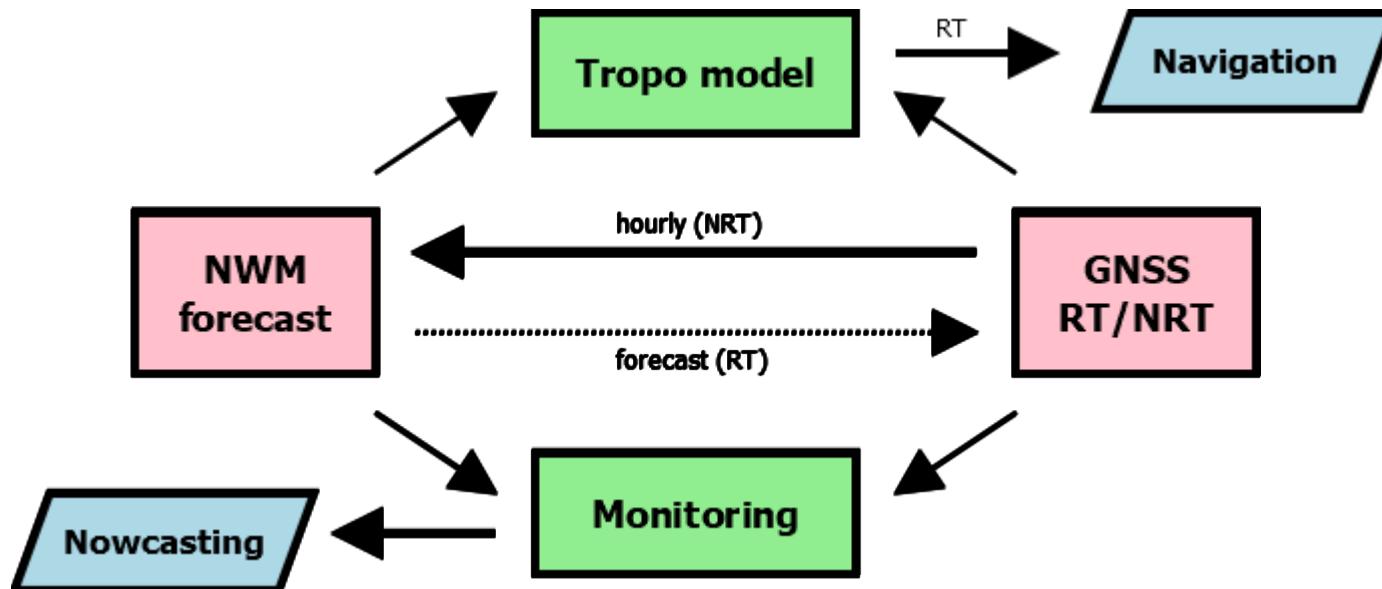

# GNSS, Troposphere & Meteorology

## (synergy in troposphere monitoring/modelling)

Tropospheric parameters from GNSS are **side products** along with estimating geodetic parameters of main interest, and need to be estimated if high-accuracy geodetic products are of interest.

- **Geodesy:** *assessing/improving* tropospheric modelling for geodetic applications
- **Geodesy:** *exploiting* external tropo corrections for RT positioning/navigation
- **Meteorology:** *improving* numerical weather prediction, weather nowcasting
- **Climatology:** *monitoring* of long-term trends in water vapor content/variation

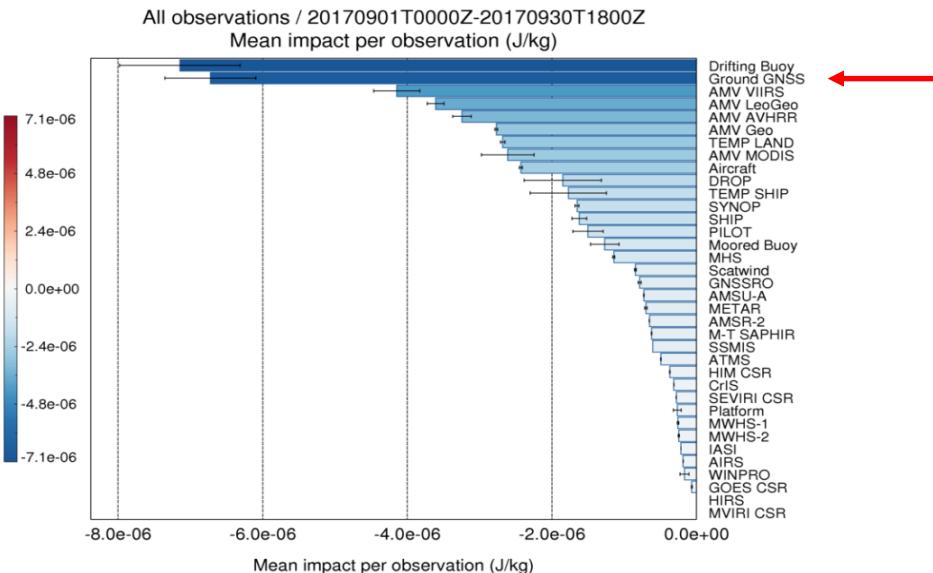

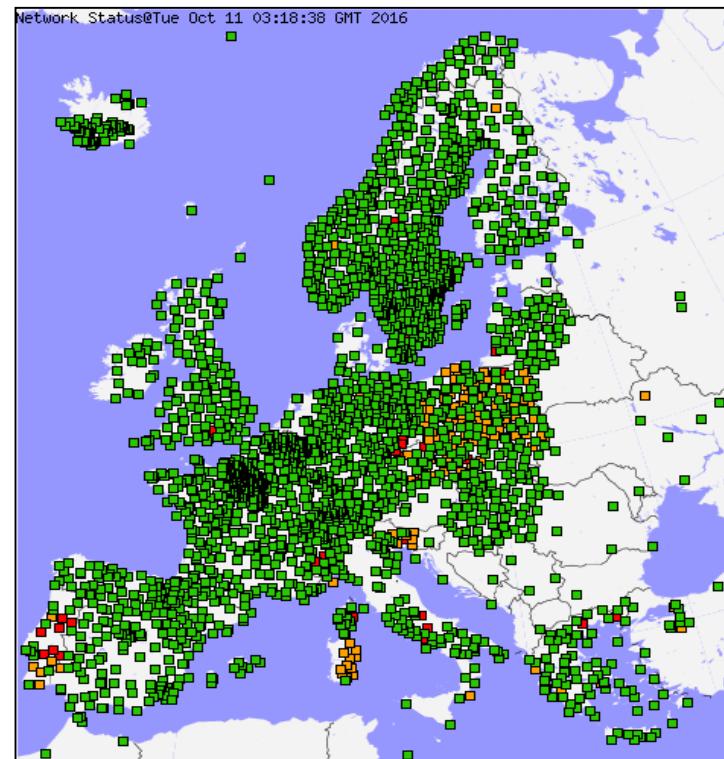

# Standard near-real time processing

*The EIG EUMETNET GNSS Water Vapour Programme, E-GVAP I-III (2005-2019)*

- Focus is on **hourly processing for ZTDs** near real-time processing for results **within 90 min**
- In support of operational dissemination, quality control and assimilation of GNSS ground-based ZTD
- Contributions of **20 analysis centres**
- Project coordinating the **near real-time** delivery of data from ~2600 GPS sites

# GOP tropospheric solutions (2001-present)

## (Near) real-time solutions:

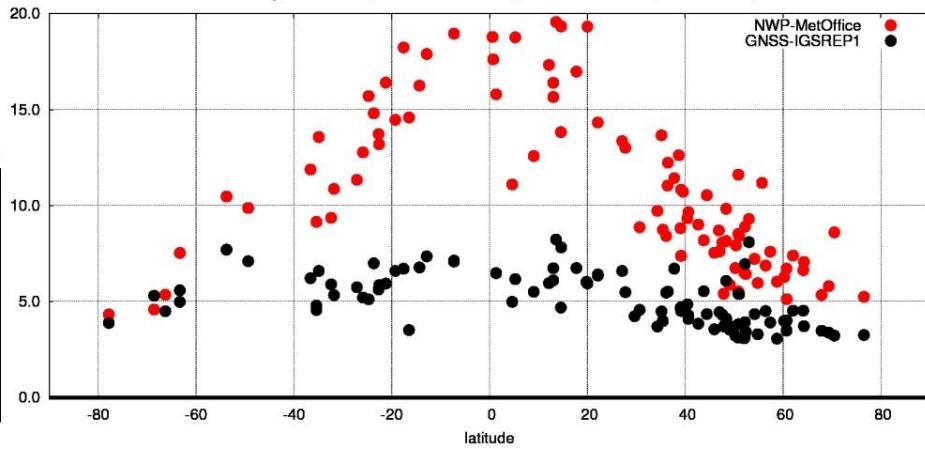

- Regional (since 2000)
- GPS+GLONASS (since 2008)
- Global (since 2010)
- Real-time (since 2014)
- Support to partners (since 2015)

## Software/strategy

- Bernese GNSS Software V52  
*network solution (DD)*
- G-Nut/Tefnut  
*Precise Point Positioning (PPP)*

Comparison to UK MetOffice global NWM

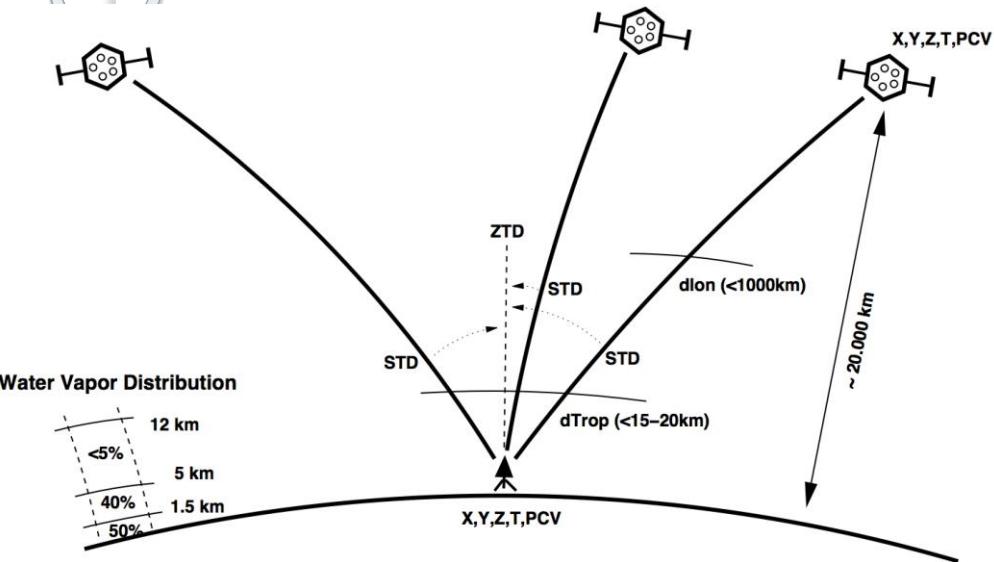

| ZTD × ZTD/final | Bias         | StdDev  |
|-----------------|--------------|---------|
| regional        | < $\pm 1$ mm | < 5 mm  |
| global          | < $\pm 3$ mm | < 8 mm  |
| real-time       | < $\pm 5$ mm | < 10 mm |

Douša J, Václavovic P, *Evaluation of ground-based GNSS tropospheric products at Geodetic Observatory Pecny*, IAG Symposia, Springer, 2016

Dousa J, Bennett GV, *Estimation and evaluation of hourly updated global GPS zenith tropospheric delays over ten months*, GPS Solut, 2013

Douša J, *Towards an Operational Near-real Time Precipitable Water Vapor Estimation*, Phys Chem Earth, Part A, 2001

# PPP for troposphere monitoring

## Precise Point Positioning (PPP)

- ✓ absolute estimates
- ✓ autonomous method
- ✓ optimal in multi-GNSS
- ✓ highly efficient
  - real-time processing
  - high-temporal resolution
  - asymmetry modelling
  - stochastic modelling

→ implemented in G-Nut/Tefnut

## GNSS model (ZTD + gradients)

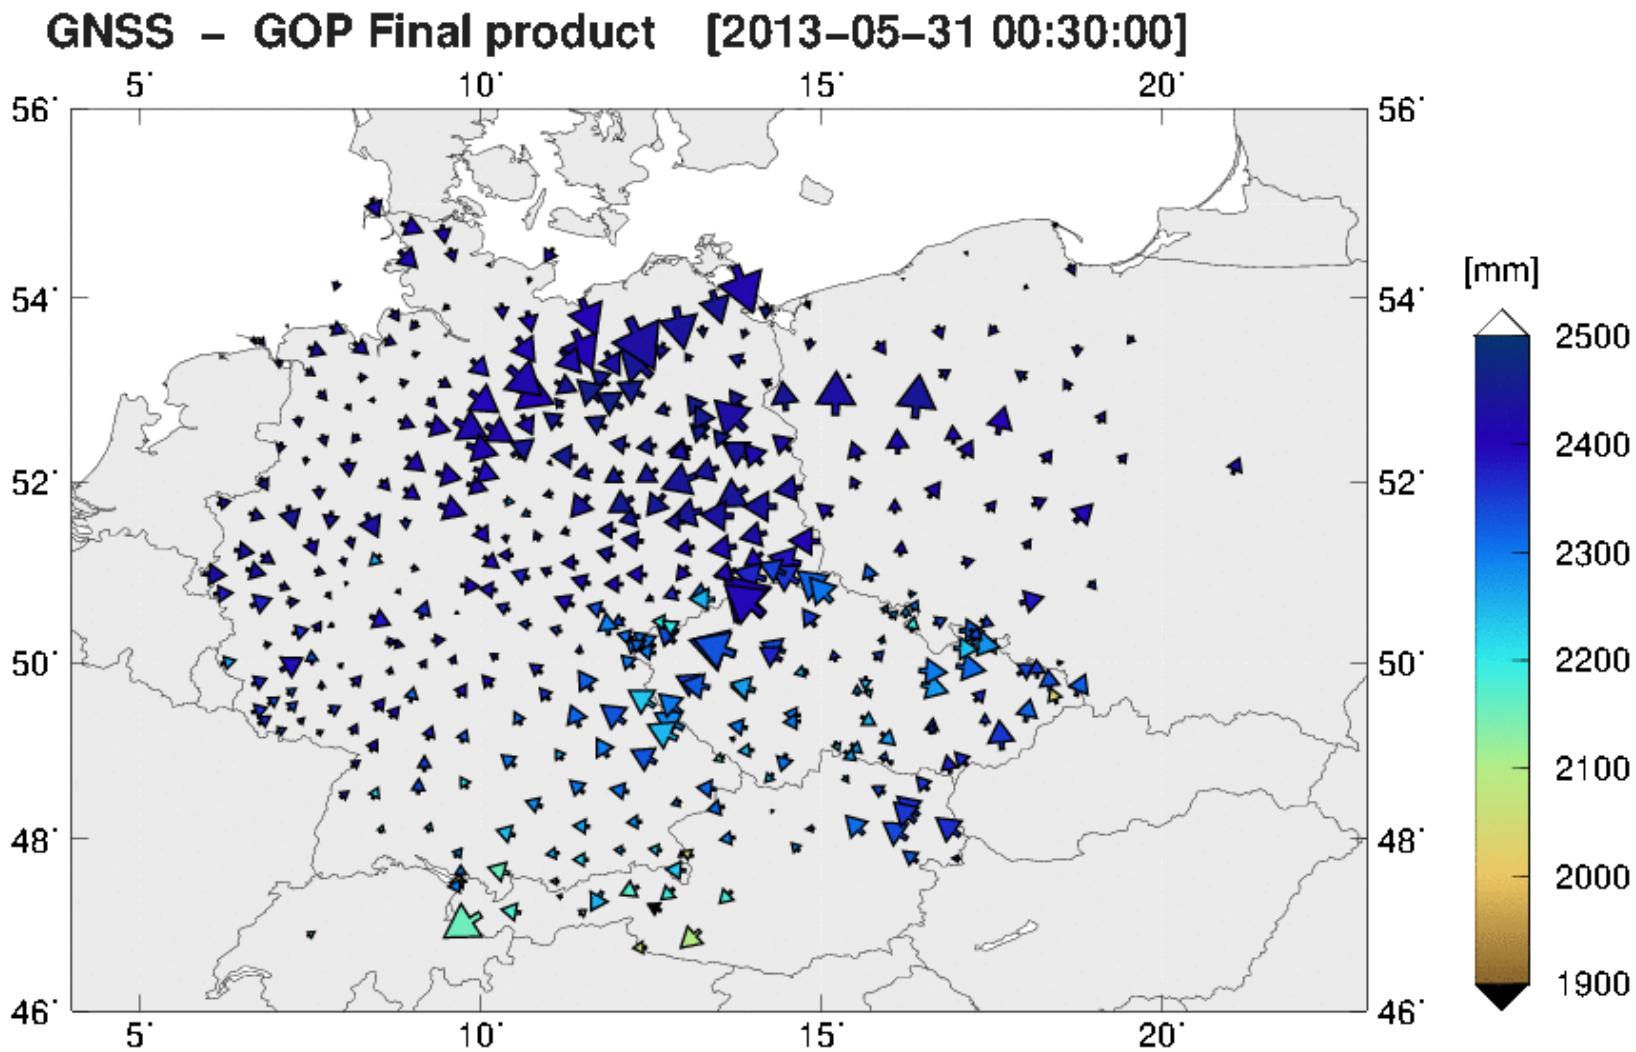

$$d_{trp} = mf_h \boxed{ZHD} + mf_w \boxed{ZWD} - mf_g [G_N \cos A + G_E \sin A]$$

## Slant retrievals (using clean post-fit carrier-phase residuals)

$$d_{trp} = mf_h ZHD + mf_w ZWD + mf_g [G_N \cos A + G_E \sin A] + \boxed{res - mpt}$$

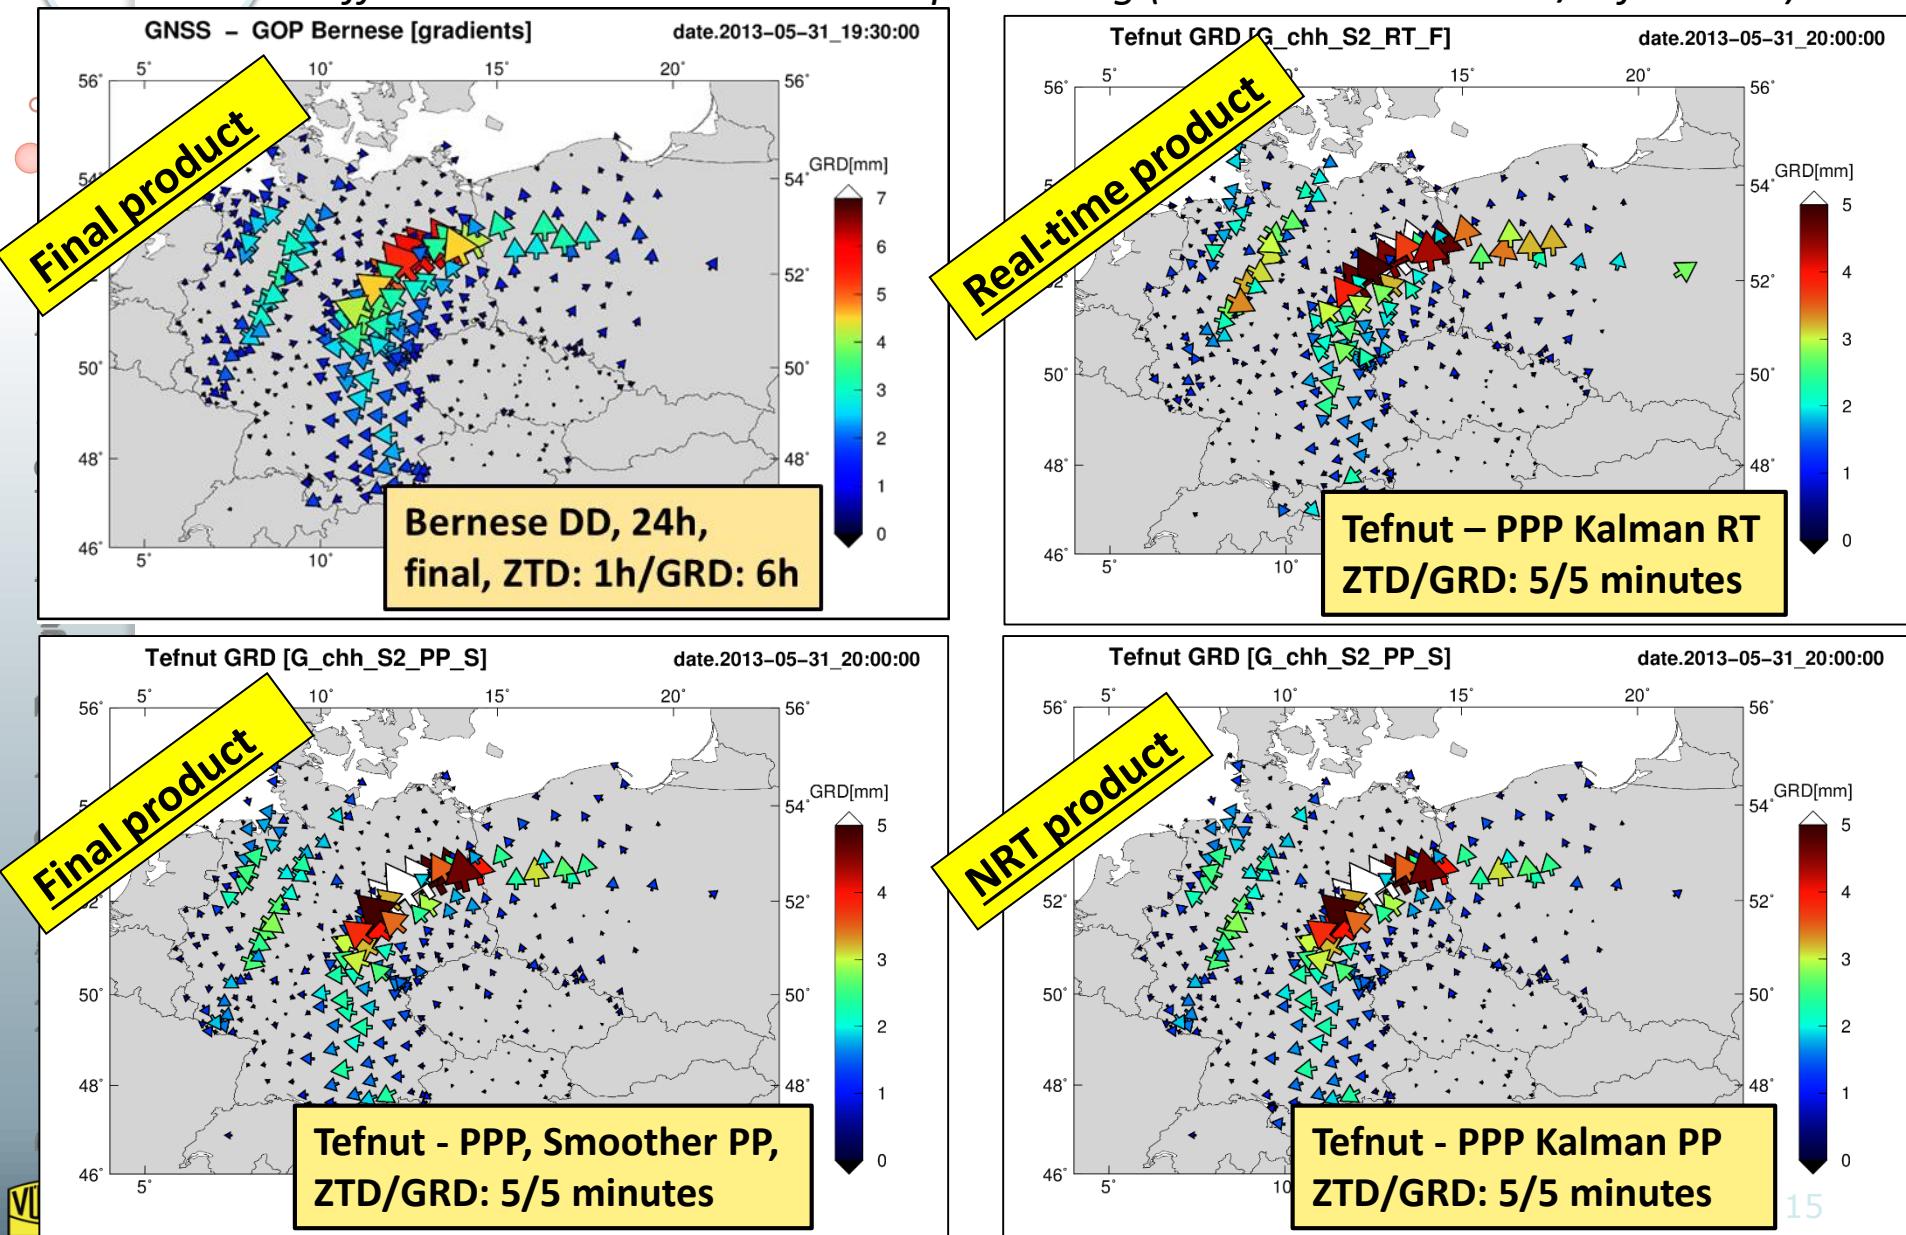

# Troposphere horizontal 1<sup>st</sup>order gradients

→ Exploiting dense Benchmark campaign for monitoring horizontal anisotropy

# GNSS tropospheric gradients

offline and simulated real-time processing (Bernese DD & G-Nut/Tefnut PPP)

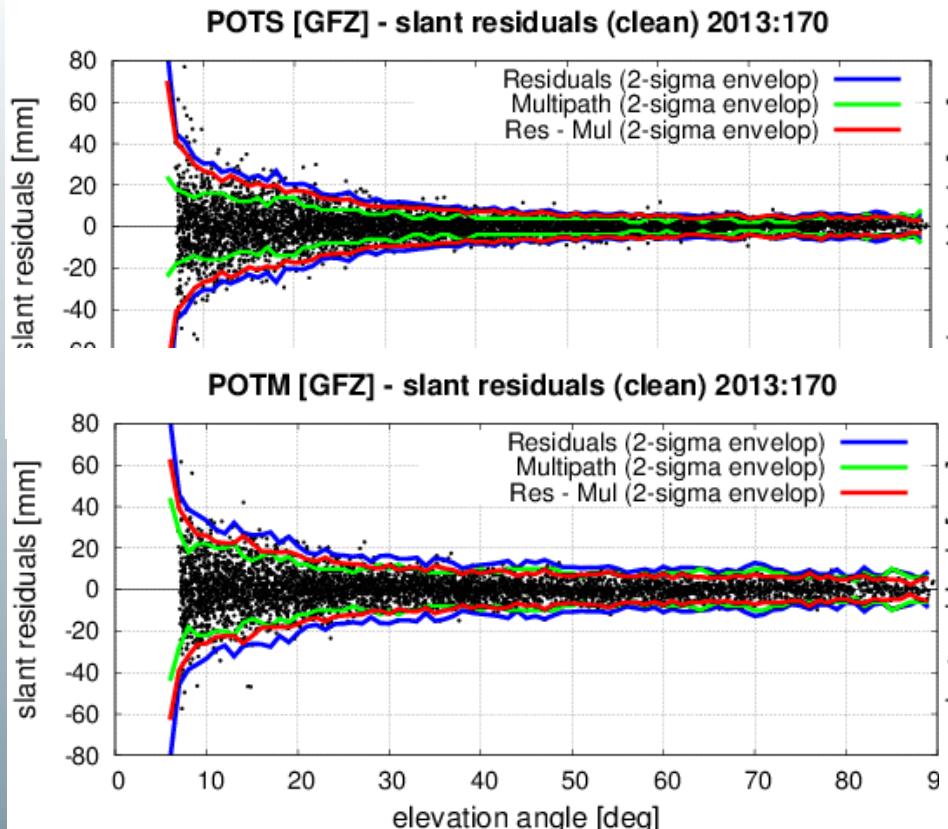

# Carrier-phase post-fit residuals

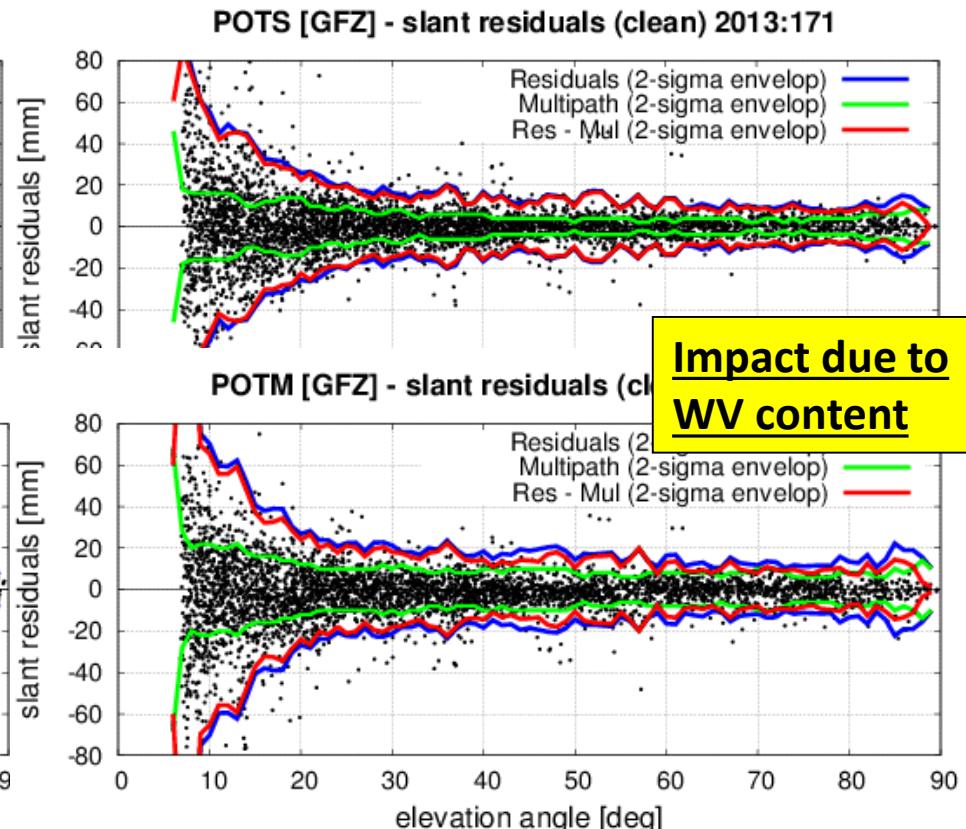

## Dual station: POTS/POTM (June 19-20, 2013)

- Slant residuals from the day with normal (left) and variable (right) conditions
- 2-sigma envelops for multipath, raw and clean residuals at dual stations displayed

Normal day (June 19, 2013)

× Severe day (June 20, 2013)

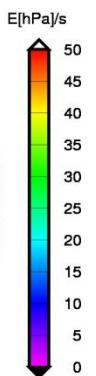

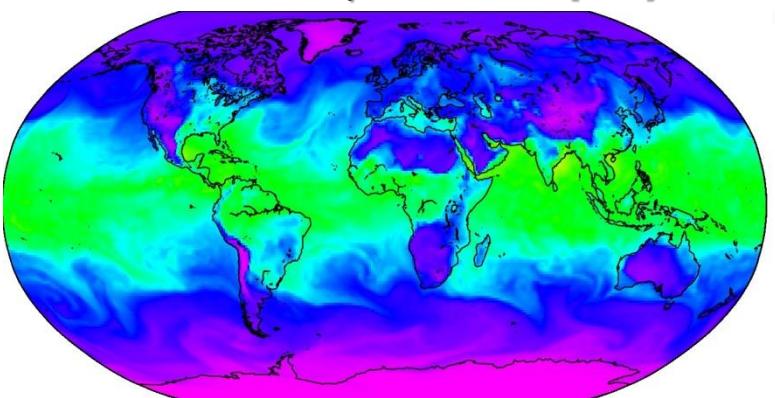

# Characteristics of troposphere corrections

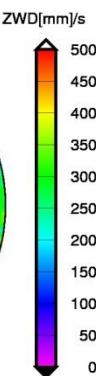

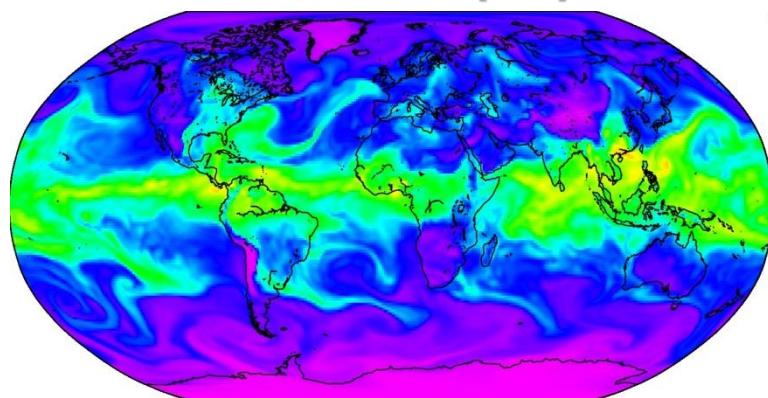

Characteristics of tropospheric parameters: Global ERA-Interim data (2005-06-05:00)

Water Vapour (WV), Pressure (P), Zenith Wet Delay (ZWD), Zenith Total Delay (ZTD)

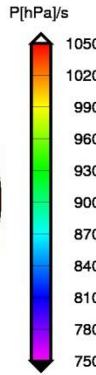

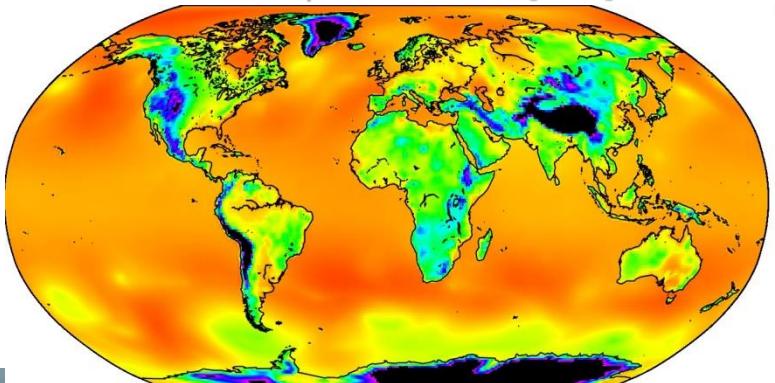

Surface WV pressure – E [hPa]

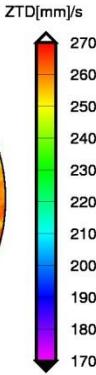

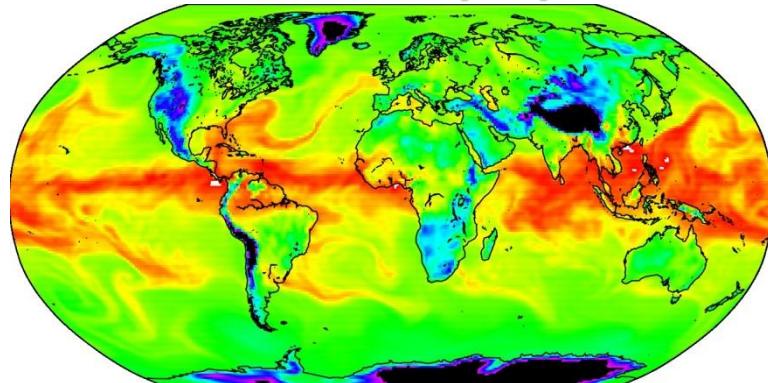

Surface ZWD [mm]

Surface pressure – P [hPa]

Surface ZTD [mm]

# Troposphere correction models for positioning

ESA ITT project

ITT AO 7076

partners: Netherlands Aerospace Center (NLR)

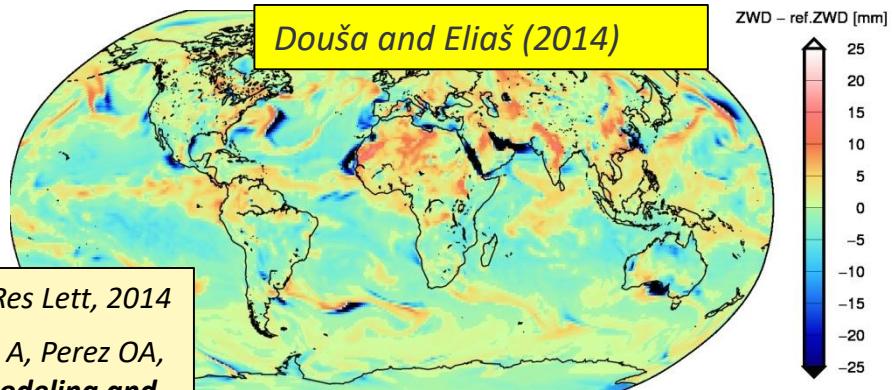

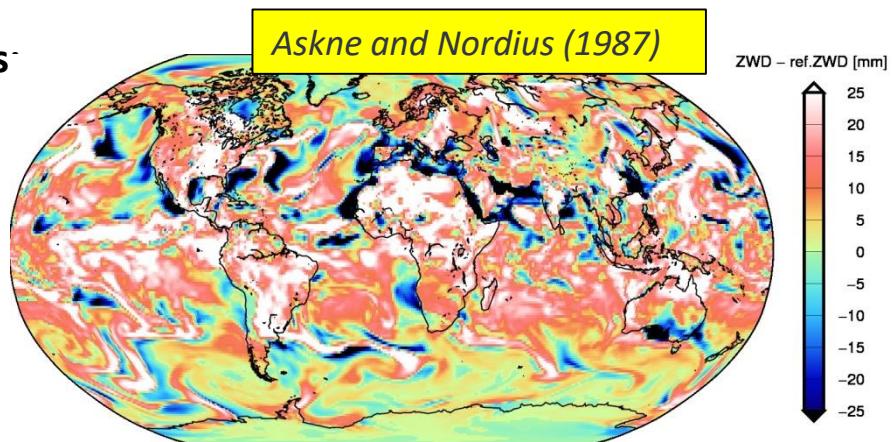

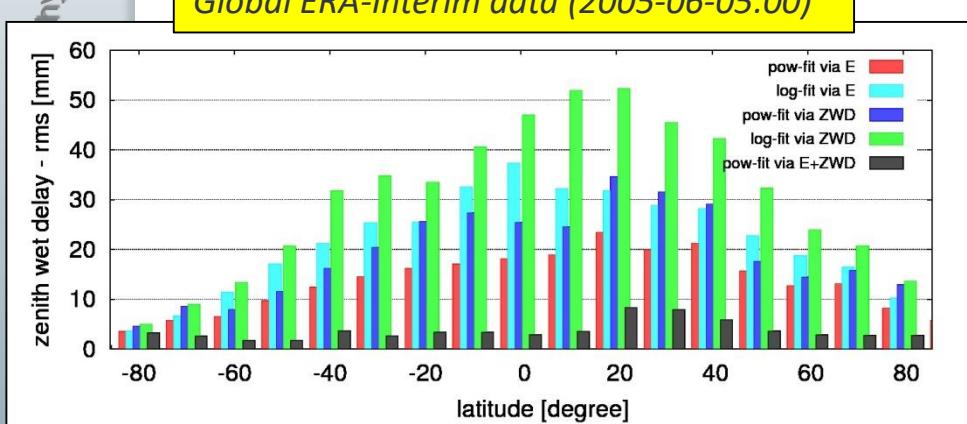

Royal Netherlands Meteorological Institute (KNMI)

## Enhanced modelling of Zenith Wet Delay (ZWD)

- Improved ZWD physical model of Askne and Nordius (1987)
- Improved ZWD vertical scaling

## Model developments for different user modes

- Blind, Augmentation, Site and Combined

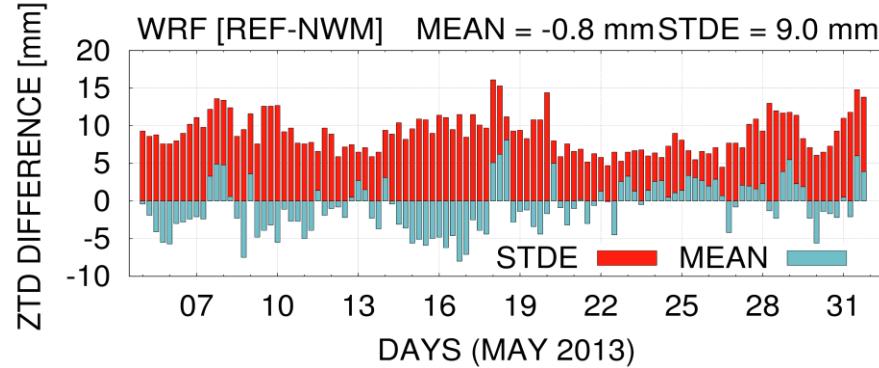

Douša and Eliaš, An improved model for tropospheric wet delay, Geophys Res Lett, 2014

Douša J, Eliaš M, Veerman H, van Leeuwen S, Zelle H, de Haan S, Martellucci A, Perez OA, High accuracy tropospheric delay determination based on improved modeling and high resolution Numerical Weather Model, Proceedings of ION GNSS, 2015

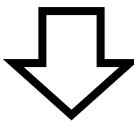

# Troposphere modeling for GNSS RT applications

New 2-stage troposphere modelling combining hydrostatic delays from Numerical Weather Model (NWM) forecast and wet delays from (near) real-time GNSS

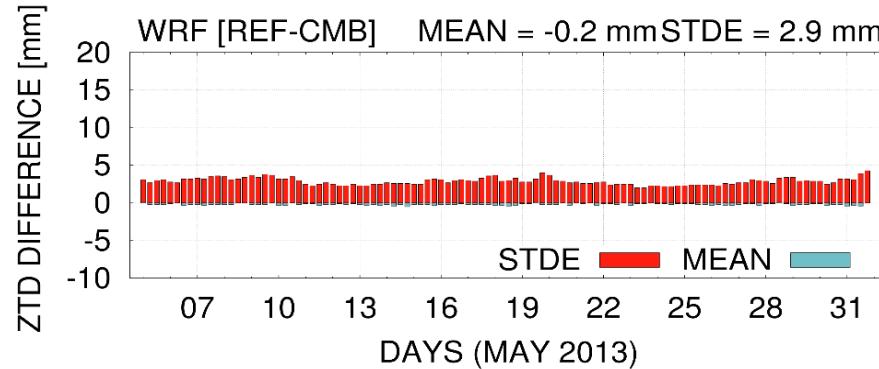

## NWM-only ZTD prediction

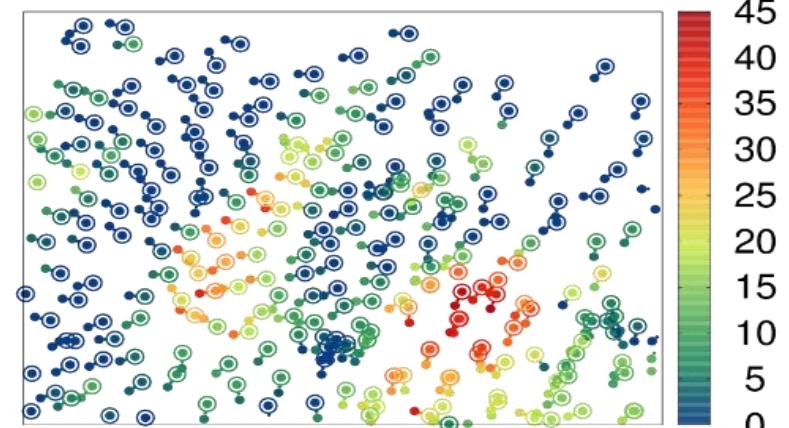

Improvement in  
by a factor of 2-4  
in ZTD accuracy

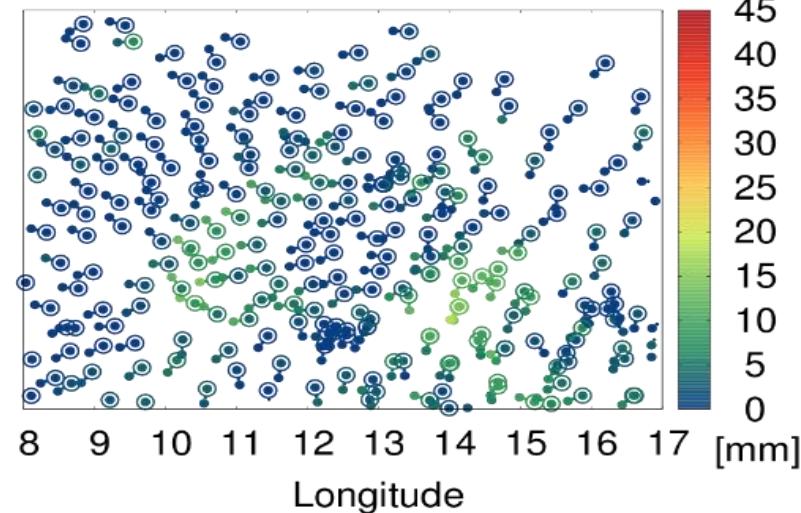

NWM+GNSS  
by a factor of 2.5  
in ZTD stability

REF - WRF (NWM-only)

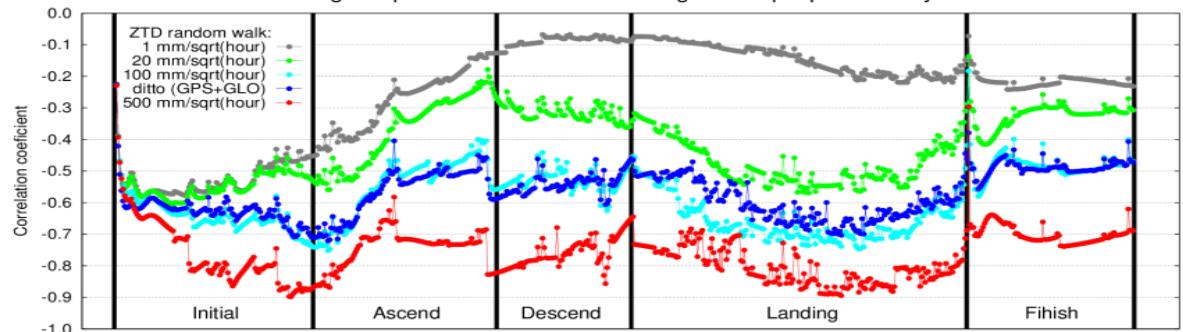

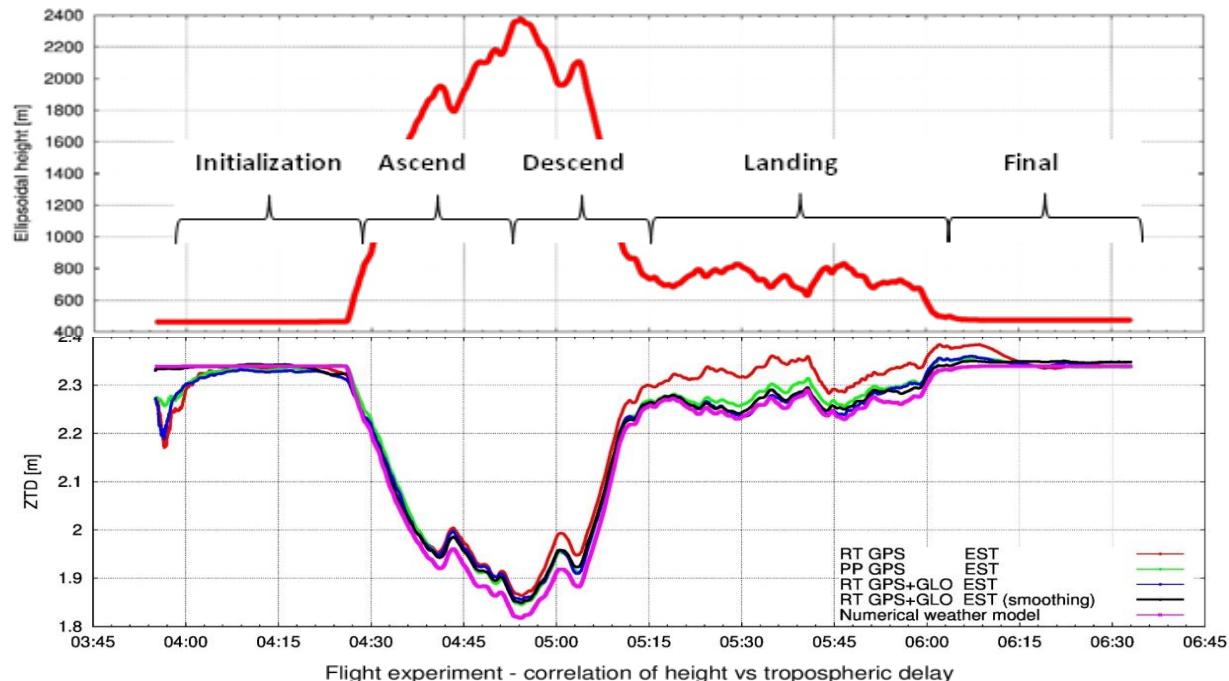

REF - WRF/GPS (combined)

# GNSS Real-Time kinematic positioning

ESA EGEP project, RIGTC/GOP (prime), Institute of Computer Science ASCR (partner)

- Hot-air balloon positioning with GNSS
- 2.4 km above ellipsoid  $\approx$  2 km above earth surface
- 12<sup>th</sup> August 2015 (5:45 – 8:45) initial + final phase: 30+30min

Václavovic P, Douša J, Eliaš M,  
Kostelecký J (2017) - Vertical kinematic  
GNSS positioning supported by external  
tropospheric corrections, GPS solutions,

# Summary

## Multi-GNSS data collection and dissemination

- **GNSS observations** – operating stations in the Czech Republic and Greece
- **GNSS data flow** – daily/hourly and real-time data centers, historical archives
- **GNSS data quality control** – monitoring data quality

## High-precision multi-GNSS analysis

- **GNSS global products** – GNSS orbit and clock ultra-fast production/monitoring
- **GNSS reference frame** – long-term reference station coordinates and velocities
- **GNSS positioning** – offline/real-time PPP and kinematic applications
- **GNSS meteorology** – troposphere monitoring in (near) real-time
- **GNSS climatology** – homogeneous re-analysis of tropospheric parameters

## GNSS modelling and software development

- **GNSS modeling** – augmentation tropospheric corrections for precise positioning
- **GNSS software** – development of high-precision in-house multi-GNSS software

# Thank you for your attention
